

Name: Ravikant Tyagi

Email: ravi.py4all@gmail.com

Phone: 9643152667

Professional Summary

- 10+ years of expertise in software development, certified as a **MCT** (Microsoft Certified Trainer) and **Microsoft Azure AI Engineer Associate**, specializing in building, deploying and managing end-to-end AI solutions.
- Proficient in **web and desktop application development** with strong command over **Python** and its frameworks, including **Django and Flask**.
- Skilled in object-oriented programming using **Java**, adhering to **SOLID principles** and leveraging **design patterns**; experienced with frameworks like **JSP, Spring Boot and Hibernate**.
- Extensive knowledge in **Full stack application development**.
- Familiar with **Mobile application development** using **React Native**.
- Proficient in **Machine learning, Deep learning, Gen AI, Agentic AI, MS Copilot, GitHub Co-Pilot, Microsoft Azure AI Solutions** with a focus on innovative solutions.
- Skilled in Data analysis and Visualization using tools like **R Programming, Power BI, Tableau** and libraries like **Numpy, Pandas, Matplotlib, Seaborn, and Plotly**.
- Have a good experience in implementing packages and libraries like **Scikit-learn, Tensorflow, Pytorch, OpenCV, NLTK, Selenium**, and many more.
- Familiar with database technologies, including **MySQL, MongoDB, Snowflake and Oracle**.
- Expertise in Big data technologies like **Hadoop, PySpark, Lucene, Solr, Elastic Search, PIG, and Hive**.
- Skilled in **DevOps** practices with tools and technologies, including **AWS, Git, GitLab, CI/CD pipelines, Docker, Kubernetes, etc.**
- Delivered hands-on training on **Gen AI, Agentic AI, MCP, MS Copilot, GitHub Copilot** to **more than 2000** employees.
- **Trained over 10k+ students** and delivered technical trainings for reputed universities like UPES, Bennett, Delhi Technical University, Amity University, North Cap University, IGDTU, Thapar Institute of Engineering & Technology, DIT, Sharda University, Manav Rachna University, ABES Engineering College, RKGIT, Delhi University, Bhartiya Vidyapeeth, Bhagwan Parshuram, Maharaja Agrasen, Maharaja Surajmal Institute, SRM etc.
- **Specialized in FDP Programs**. Delivered FDPs in North Cap University, IGDTU, DCRUST, Amity University, Manav Rachna University, Thapar Institute of Engineering & Technology, Manipal University, NITTTR Chandigarh etc.
- Also **Delivered Technical Trainings for various corporate clients** like HCL Tech, Xebia, Tata Power, IndiaMart, UST Global and many more.

Technical Skills:

Programming Languages:

Python, Java, C++, R Programming, JavaScript

Web Technologies & Frameworks:

HTML5, CSS3, JavaScript (ES6+), React, jQuery, Bootstrap, Node JS, Django, Flask, Spring Boot, Hibernate, RabbitMQ

Artificial Intelligence & Machine Learning:

Machine Learning, Deep Learning, Generative AI, LLMs, LangChain, LangGraph, Agentic AI, MCP, RAG, Copilot

Data Science & Analytics Libraries:

NumPy, Pandas, Scikit-Learn, Seaborn, Matplotlib, Plotly, TensorFlow, Keras, PyTorch, Spark

Databases & Big Data:

MySQL, MongoDB, Snowflake, Redis, Hive, PIG, HBase

DevOps & Deployment:

Docker, Kubernetes, Jenkins, Git, Microsoft Azure, AWS

Tools & IDEs:

Jira, Control-m, Datadog, VS Code, PyCharm, IntelliJ IDEA, Eclipse, Jupyter Notebook

Work Experience

Xebia IT Architects

(Feb 2025 – Till Date)

General Manager

Working as a senior trainer and general manager with Xebia. Provided trainings on different profiles like Full Stack Web Development, Java Full Stack, AI, Gen AI, Data Science, Big Data, DevOps. Responsible for delivering high quality technical trainings to employees, students and faculties.

HCL Tech

(Sept 2023 – Jan 2025)

Senior Software Engineer

Working as a senior software engineer with HCL. Handling a US based banking application. Responsible for implementing features on back-end and running CI/CD pipelines. Mainly using Python and Java for implementing features. Using Gitlab for running pipelines and control-m for job scheduling.

Brain Mentors Pvt Ltd

(Aug 2016 – Aug 2023)

Software Trainer

Worked with different profiles like software development, data science, web application development and software training. Responsible for implementation of applications that are required in software training for various clients like Indiamart, Tata Power and deliver technical training to the developers. Also responsible for developing data science applications for research purpose for scholars. Worked with government project for DRDO.

Work Profile

Project: USAA Banking Application

Duration: Nov 2023 – Jan 2025

Role: Senior Developer

Tools: Python, Java, Spring Boot, SQL, Gitlab, Control-m, Docker, Kubernetes, Datadog

Project Concept Definition: US Based banking application

Responsibilities:

- Involved in implementation of features using Python and Java Programming.
- Maintain code on Gitlab and handle CI/CD pipelines.
- Designed and developed solution by converting a legacy C# loan performance system in Python, integrating control-m automation, secure credential management, and API based data workflow on a windows batch environment.
- Track pods on OpenShift to analyze metrics and collect logs with various load on application
- Implemented datadog in project to track logs in more detail and integrated with Java Application and Python Application as well.
- Used frameworks like Spring Boot and Hibernate for implementing features that are Java based
- Worked with different environments like dev, test and prod. Tested code with these environments and worked with UCD to deploy changes to production.

Project: Quora Replica Web App (Web based platform for question and answers)

Duration: May 2020 – AUG 2020

Role: Developer

Tools: Python, Django, HTML 5, CSS 3, JavaScript, Django ORM

Project Concept Definition: Web based platform just like Quora to ask questions on a particular category. Integrated with authentication from Gmail and Facebook to help used login. Integrated Machine Learning to perform sentiment analysis to predict the sentiment of answers whether the answer is positive or negative.

Responsibilities:

- Created the whole Back-end system with Django ORM.
- Generated Django Forms to perform back-end form validation and store data.
- Handled all the client-side validation using JavaScript
- Worked with MVT architecture to handle model, views and templates.
- Integrated authentication from Gmail and Facebook.
- Integrated packages for REST framework for Serialization. Also integrated Django-bootstrap and generic views.
- Trained a machine learning model using Naïve-Bayes algorithm and perform serialization.
- Deployed machine learning model to the web app and tested model on answers.

Project: Live Streaming of tweets (Web application for streaming tweets)

Duration: June 2022 – Aug 2022

Role: Developer and Analyst

Tools: Python, Flask, PySpark, Tweepy, Networking, Multi-threading, API Calls

Project Concept Definition: Web based live streaming application to fetch tweets from Twitter. This app helped users to continuously stream tweets on there web UI without opening and logging in to Twitter.

Responsibilities:

- Implemented the whole client-server based architecture using Python and flask.
- Implemented the different modules to perform live streaming using PySpark.
- Integrated Tweepy library as helper package to fetch tweets.
- Worked with PySpark to perform analysis and read stream continuously.
- Performed API calls to Twitter to collect different information like username, tweets, date posted etc.
- Integrated networking (socket programming) to build a client server architecture where server starts streaming and sends data to client.
- In order to dynamically update web pages, integrated turbo-flask which is a flask extension.
- Worked with multi-threading to perform everything in parallel.
- Worked with Flask framework to build web application.
- Implemented User Interface with HTML 5 and CSS 3. Used w3c standards to validate HTML code.

Project: Pedestrian detection application (Web based platform for detecting pedestrians)

Duration: June 2023 – July 2023

Role: Developer

Tools: Python, PyTorch, Streamlit, Google Colab

Project Concept Definition: Web based platform where user can upload image and using deep learning it returns an image with pedestrians detected. With the help of PyTorch framework and FastRCNN, MaskRCNN this was implemented

Responsibilities:

- Implemented the whole deep learning model to train the images dataset.
- Implemented FastRCNN, MaskRCNN with PyTorch framework for object detection and bounding boxes.
- Saved and loaded model on web using streamlit.
- Implemented deep learning model on Google Colab with GPU processing.
- Tested with images and live videos model was more than 90% accurate.

Project: Nuclie Segmentation

Role: Data Scientist

Tools: IBM – Python, Tensorflow, OpenCV, Spyder, Streamlit

Project Concept Definition: Deep Learning based web application to perform image segmentation on nuclie dataset.

Responsibilities:

- Collected data of 600+ images of nuclie and mask of images were also available.
- Mask of each image was divided into different images, so first combined the masks into one image for one nuclie image.
- Used OpenCV to perform image processing and reshaping of data.
- Implemented the UNet model from scratch using Tensorflow.
- Model was able to give accuracy of 95% and tested on real time datasets.
- Saved the model and deployed on web using streamlit package.
- Implemented the User Interface using streamlit only and created UI for uploading images.

Education

Master of Computer Applications

INMANTEC Ghaziabad, AKTU

Bachelor of Computer Applications

I.T.S Ghaziabad, CCSU

Personal Details

DOB: 22 Nov 1995

Address: B-1201, MSS Bliss, Govindpuram, Ghaziabad (201013), Uttar Pradesh, India
